Bootcamp Tasks Week 1

HTML – Day 2 – Task:

Create some example forms. Your forms must include the an example of each of the following input types:

Radio buttons
Checkboxes
File Upload Input
A Textarea
A Dropdown List

HTML – Day 3 – Task:

Put together a basic HTML webpage structure with an appropriate use of Semantic HTML, alongside correct use of both the Class and ID attributes.

Your webpage must include an embedded YouTube video and an embedded Google Map.

Research "Favicons" and see if you are able to change the Favicon of your website.

Finally, utilise HTML validation to ensure that your HTML is error free.

CSS – Session 1 – Task:

Add some CSS styling to either an existing HTML webpage you have worked on, or a new HTML file.

You must correctly create and link a CSS Stylesheet to your HTML file and apply some CSS Rules to your webpage.

Your CSS file must include examples of:

- An element selector
- A class selector
- An id selector

- An imported font (Google Fonts)

Alongside use of the following CSS Properties:

margin, padding, border, color, background-color and font-family.

Experiment with your CSS to see how the properties and values impact the styling of your elements.

Day 5 - Tasks:

1: Sign up for GitHub - https://github.com/

2: Download and install GitHub Desktop - https://desktop.github.com/

3: Follow the tutorial on GitHub Desktop to link it to your GitHub account and create your first repository.

4: Add the relevant files for this weeks tasks to the repository and publish it to GitHub.

Stretch Task:

Push an index.html file with some content to a separate GitHub repository and try to host the website using GitHub Pages.
